

Online Sales

Y.E.S.!™ enables merchants to sell items online, as well as in the store, both controlled from the same inventory. One click of the mouse is all it takes to retrieve and list all sales and orders placed on their customized web site, to help expedite and automate order processing and fulfillment.

Each order is selected, reviewed, and then processed. Depending on the online customer's method of payment, the merchant chooses to label the transaction as a cash sale (already received the funds) or invoice (bill the customer for the total). Billing and shipping labels, invoices, receipts, and packing slips can also be printed from this screen. Once the sale has been processed, with the click of the mouse, the inventory is automatically updated, and the customer, sales, and tax information is filed for accurate and complete record keeping.
