

Complete, Integrated Point-of-Sale System

Y.E.S.!™ includes a full featured P.O.S. system that integrates online sales with in store sales. The user interface is simple which means making a sale in the merchant's store is fast and easy - using a mouse or a few simple keystrokes.

Customer information is easily tracked, and the merchant can offer customers payment options that include cash, credit card, credit, or other means of payment. In addition, invoices and credit memos are easily created for each customer. Based on merchant-defined criteria, any shipping charges and sales taxes are automatically calculated and applied.

Y.E.S.!™ also has built-in barcode technologies for in-store use. Select items from inventory, type the bar code number, or simply **scan items** to add the items to the sale. When a sale is completed from the Point-of-Sale screen, the inventory is automatically updated, and the sales, customer, and tax information is recorded. And because Y.E.S.!™ is a complete e-business solution, items for sale in the store and online are from the same inventory. As a result, Y.E.S.!™ provides a seamless business operation for the merchant.
