

Complex Tax Calculator

Merchants are required to accurately track and report sales taxes. In order to provide complete control of this tedious and complicated responsibility, **Y.E.S.! SALES TAX™** provides the merchant with the means to automatically calculate, collect, track and report all applicable taxes associated with each sale. With this Tax Rules Module, merchants with complex taxing schedules have the flexibility to assign specific tax rules on an item-by-item basis.

For each sale, the appropriate taxes are applied and separated into the agencies to which the merchant must file. At tax time, **Y.E.S.! SALES TAX™** develops reports detailing the amount of taxes required to each **agency**. This feature gives you, the merchant, the peace of mind that your taxes are being accurately charged and tracked, and saves you time and money in reporting and filing.
