

Automated eBay® Auctions Interface

Y.E.S.!™ provides merchants with an **additional distribution channel** through an **automated interface to eBay® Auctions**. Inventory is easily imported into the auction site, complete with existing inventory description and image file. The merchant simply utilizes the Y.E.S.!™ **eBay® Auction wizard** to modify the inventory item description, if desired, set auction details and options, establish payment and shipping terms, and automatically submit the item to eBay®.

With just a click of a button from the inventory page, the merchant views all imported data from the inventory database, makes any additions and/or modifications desired, and submits the auction to eBay®. **Within minutes, the item is readied for the auction**, along with any special pricing and promotions, freeing the merchant to spend his or her valuable time managing the day-to-day operations of a successful growing business.
